

ALAA SAAB

Master's Student in Computer Science — Software Engineering · Systems · DevOps

Grenoble, France • +33 7 65 25 13 65 • alaasaab194@gmail.com • [GitHub](#) • [LinkedIn](#)

PROFILE

First-year Master's student in Computer Science at Université Grenoble Alpes (UGA), with hands-on experience in full-stack software development, automation, and DevOps. Comfortable working on both application code and systems/Linux-level problems, with a strong interest in software security.

WORK EXPERIENCE

Full-Stack Developer — LeLaboDigital

Since June 2026

- Migrated an existing ASP.NET/.NET application to Next.js (full functional and visual parity), including a new admin interface
- Built an internal dashboard in Next.js: intern/employee management, activity tracking, notifications and logs
- Designed custom WordPress sites (custom themes/plugins, secure forms, QA) and worked across the stack: APIs, PostgreSQL, Docker, web security

AI & Tech Intern — Mindspace

Jun – Aug 2025

- Automated workflows (n8n) and integrated APIs across multiple platforms
- Structured unorganized file archives into databases (Python, Dropbox SDK, SQLite/PostgreSQL/MongoDB)
- Developed backend features, including a secure authentication system

DevOps & QA Engineer — volunteer — JeVousAide

Oct 2025 – May 2026

- Set up and improved CI/CD pipelines (GitHub Actions) and automated tests
- Built isolated test/deployment environments using Docker, Docker Compose, and Linux VMs

Junior Tech Engineer — Saabco

Jan 2023 – Feb 2024

- Developed automation scripts (C, Python, Bash), saving roughly 30–50 minutes of manual work per day
- Structured data in MongoDB from disorganized archives

TECHNICAL PROJECTS

Tablut — Networked board game (Java, university project, UGA)

- Client/server architecture with sockets, optimized game-state representation using bitboards, object-oriented design

Systems projects in C / Linux (university projects, UGA)

- Unix mini-shell, simplified ELF linker, process and memory management, debugging with Linux tools

AI Trader — Automated trading architecture (personal project, Python)

- Modular architecture separating decision logic, market data, and execution; safeguards preventing unauthorized live trading; 500+ automated tests in paper trading

SKILLS

Languages : C, C++, Java, Python, Bash, JavaScript/TypeScript, OCaml, SQL

Web / Backend : Next.js, React, WordPress (custom), REST APIs

Systems / DevOps : Linux, Git, GitHub Actions, CI/CD, Docker, Docker Compose, VMs

Databases : PostgreSQL, MongoDB, SQLite

Security / Networks : web security, fuzzing & CTF fundamentals, networking

EDUCATION

Master's in Computer Science — Université Grenoble Alpes — 2026 – 2028

Bachelor's in Computer Science — Université Grenoble Alpes — completed 2026

LANGUAGES / ENGAGEMENT

French (fluent, C1-C2) · English (fluent, C2) · Arabic (native) — Volunteer firefighter (2019–2024) — President of a math club
